Subject:	Add "Suspend/restore" column for Summary's View other VPSes		
Description:	When there's a bunch of VPSes, like for lug.org.uk, it would be nice if the Suspend/restore setting for each was visible as a simple "Suspend" or "Restore" column in the table of all VPSes on the summary page. Makes it more obvious none have been missed rather than keep switching to each in turn and then moving to the VPS Config page.

I'm having difficulty deciding how best to display this.

At present there are only two per-VM settings: "suspend OK" and "password SSH auth OK". These could be added as columns on the summary page, but if more settings are added then the table could get very wide.

Do you think that is a problem? Should I just go ahead and add only the "Suspend OK" one, as you are only interested in that one?

I went for "Suspend" or "Restore" to try and keep the column narrow, though it would need an abbreviation as the heading, perhaps needing a key. My interest was 'Suspend OK' though I can see others would equally well like 'Password SSH auth OK' in order to spot the erroneous odd one out.

There's already two heading rows. Perhaps 'Settings' overarching on the top and 'Susp' plus 'Pw SSH' for the two columns underneath with a key?
