Subject:	Add phishing-resistant authentication for https://panel.bitfolk.com/		
Description:	<p>It would be a good thing to have the option protecting ones https://panel.bitfolk.com/ account using a phishing-resistant form of authentication such as WebAuthn/Passkeys.</p> <p>In the case of WebAuthn this could either be implementerad as a second factor using "plain" WebAuthn or as the primary factor by relying on WebAuthn Discoverable keys. The latter is what has came to be referred to as Passkeys.</p> <p>This request is somewhat of a follow-up to https://tools.bitfolk.com/redmine/issues/117. While TOTP 2FA offers a good protection against weak and reused passwords it tend to fall short against a modern phishing attack, where the provided TOTP value can be proxied together with the provided password.</p>

Here's an excellent tour through everything WebAuthn.
